

# Supplementary Material A - ConceptLearner: Discovering Visual Concepts from Weakly Labeled Image Collections

Bolei Zhou<sup>†</sup>, Vignesh Jagadeesh<sup>‡</sup>, Robinson Piramuthu<sup>‡</sup>  
<sup>†</sup>MIT <sup>‡</sup>eBay Research Labs  
 bolei@mit.edu, [vjagadeesh, rpiramuthu]@ebay.com

In this supplementary, we show the result of concept recognition on 500 random images from SUN397 dataset. See Section 6.1 of the main paper for details.

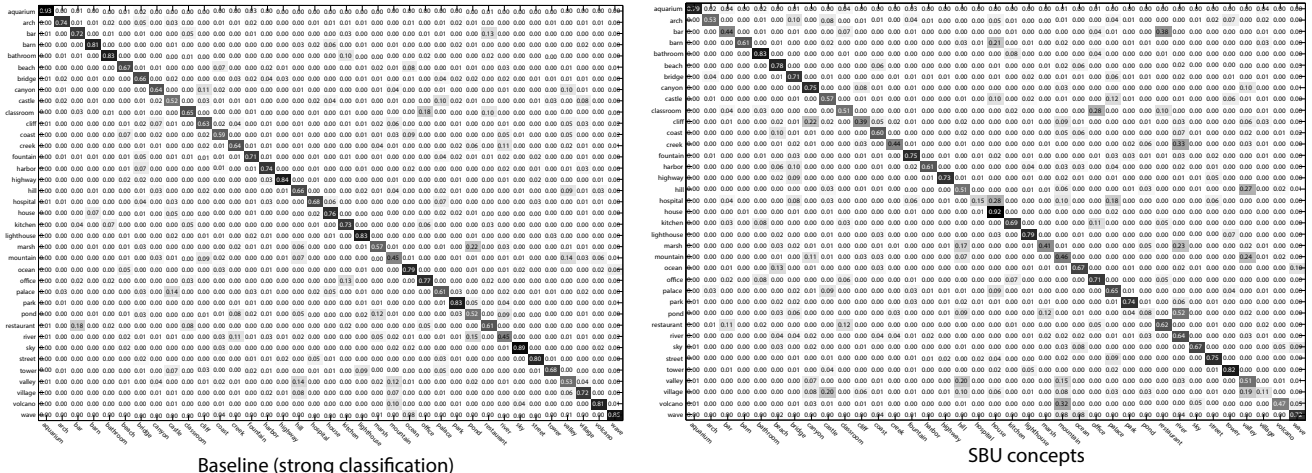

Figure 1. Confusion matrices of baseline and SBU concepts. These correspond to the results shown in Figure 7 of the main paper. See Section 6.2 of main paper for details. Categories correspond to 37 matched scene categories between SUN and SBU datasets. 50 images per attribute were used for training the baseline linear SVM classifier.

Table 1: Concept recognition on 500 random images from SUN397. Results based on concepts learned from NUS-WIDE and SBU datasets are shown in separate columns.
