# Supplementary Materials for Enhancing Vision-Language Pre-training with Rich Supervisions

# 1. Quantitative Results on Joint Training

We provide some additional discussions for the impact of joint training language and location tasks. Directly combining  $S4_{NL}$  objectives and  $S4_{Loc}$  objectives, which we denote as  $S4_{Joint}$ , harms the performance on most downstream tasks. For  $S4_{Joint}$ , we use the following weighted loss as it gives the best average performance across all tasks:

```
loss_weights = {
    'screen2html': 1.0,
    'attribute_prediction': 0.5,
    'title_generation': 0.5,
    'node_relation_prediction':0.1,
    'table_parsing':0.1,
    'ocr':0.1,
    'table_detection':0.1,
    'layout_analysis':0.1,
    'image_grounding':0.1,
    'element_grounding':0.1
}
```

# 2. Qualitative Results during Pre-training

We visualize qualitative pre-training results in below figures. For table detection, image grounding, and element grounding, red boxes denotes ground truth boxes and blue boxes denotes predicted boxes. We present four images for each of these three tasks, where the bottom right is a failure case and the others are good cases. For layout analysis, we present a pair of prediction (blue) and ground truth layout (red).
